
Biomedical Knowledge Networks at Point of Care

January 23, 2019

Charlotte Nelson

Biomedical Informatics Doctoral Candidate

Sharat Israni, PhD

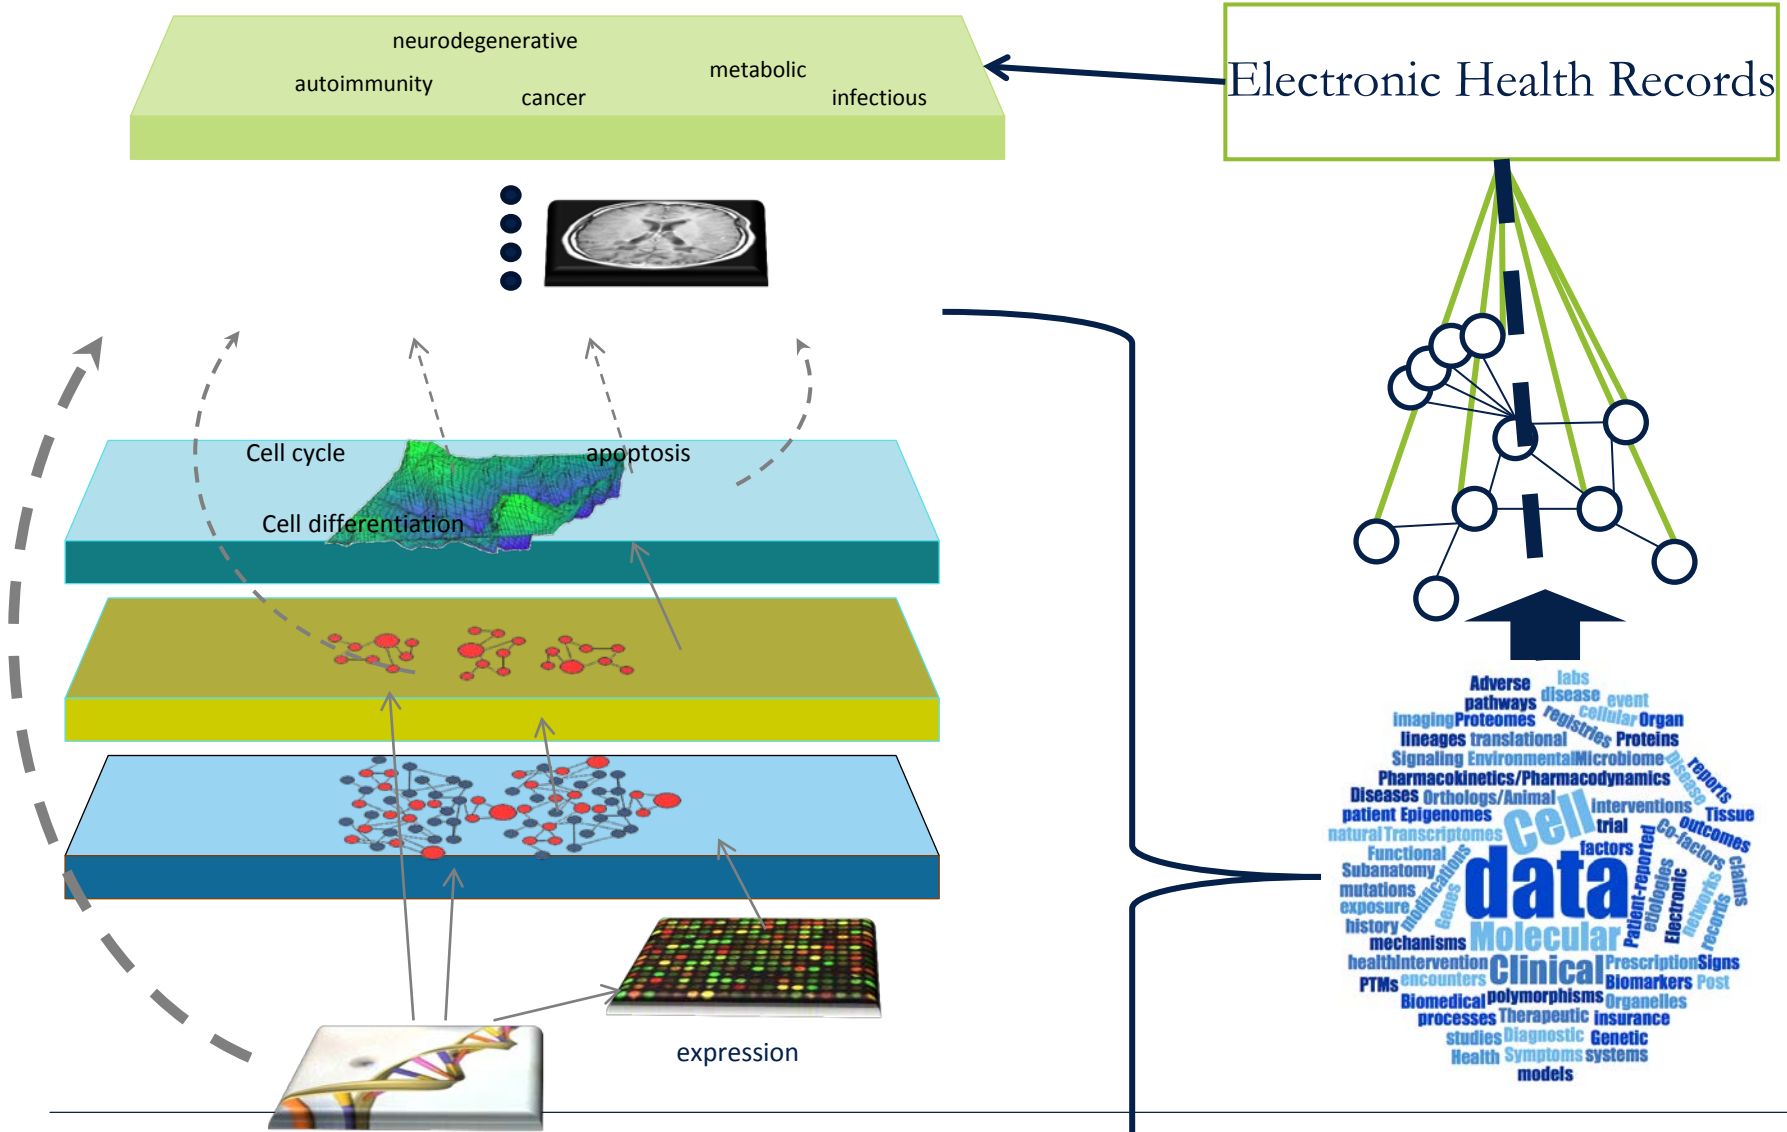

Executive Director & Chief Technology Officer

The Transformation From Data to Precision Medicine Has Not Kept at Pace

- ↑ Volume of data
- ↑ Types of data

Hierarchical organization of biological complexity

Electronic Health Records

SPOKE - Scalable PrecisiOn Medicine Knowledge Engine

Modular Analysis of
Genomic NETWORKS In
Cancer (MAGNETIC)

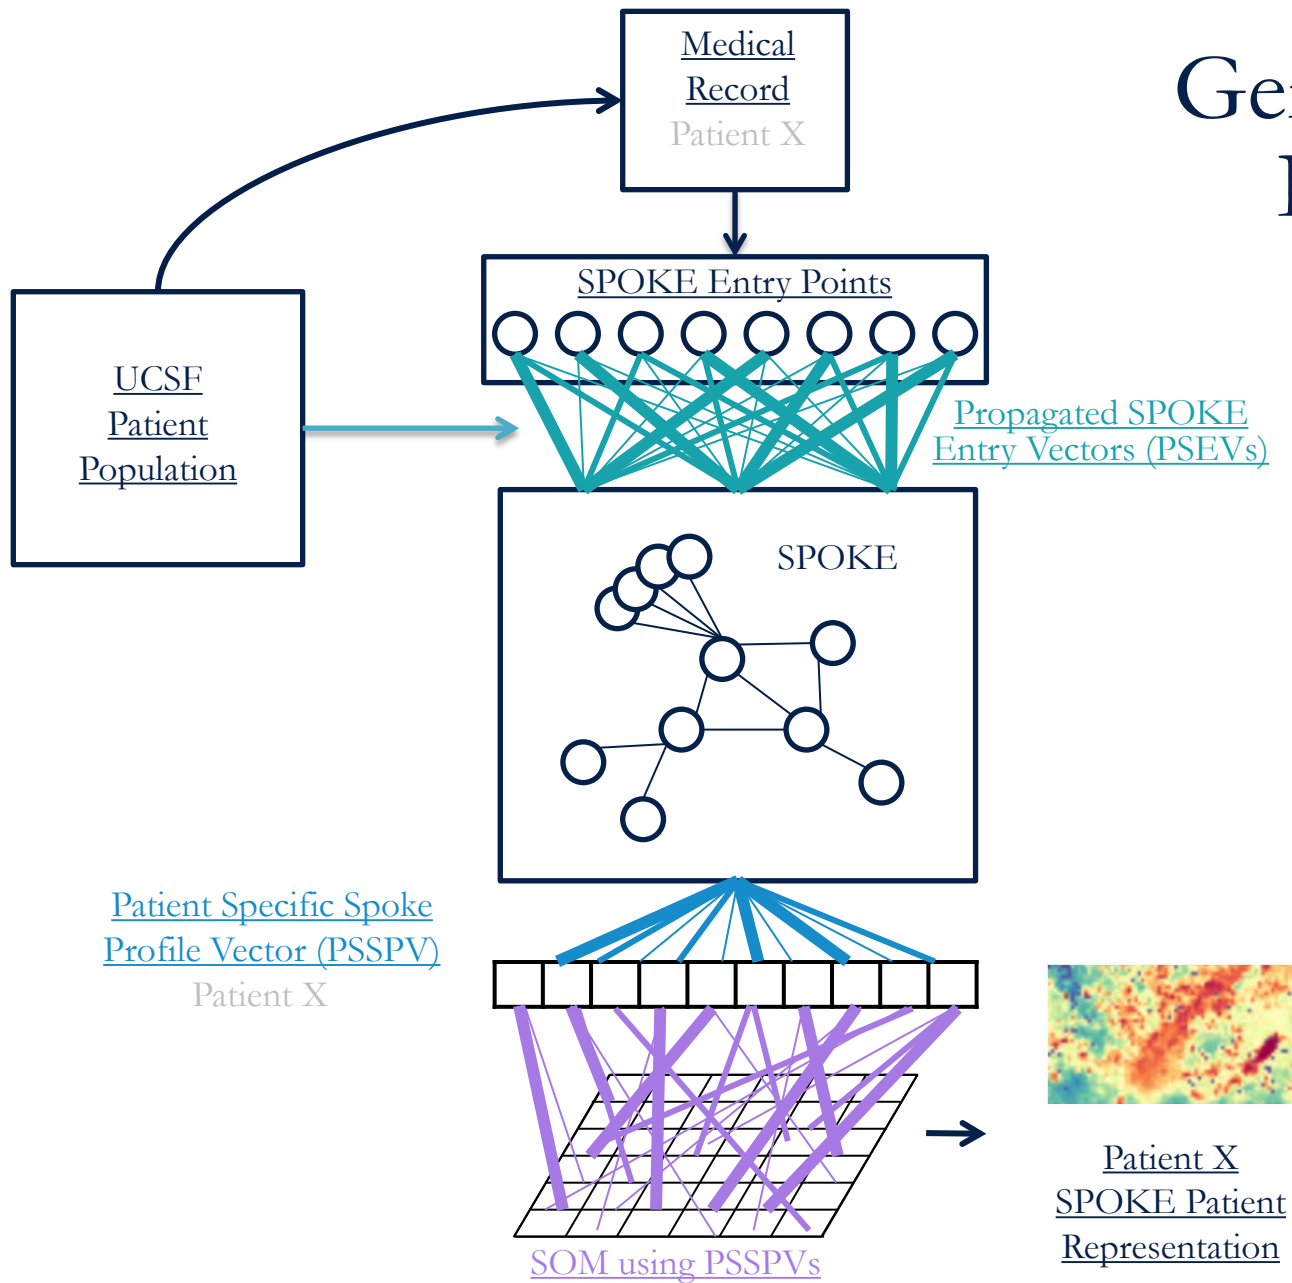

Michael Keiser
Similarity Ensemble
Approach (SEA)

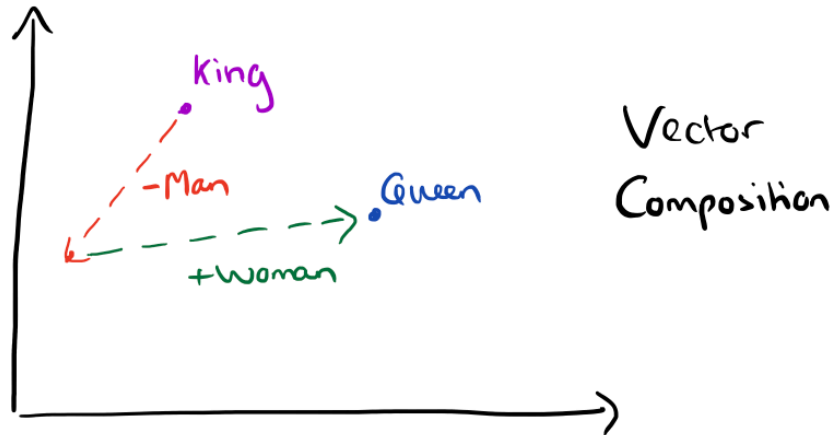

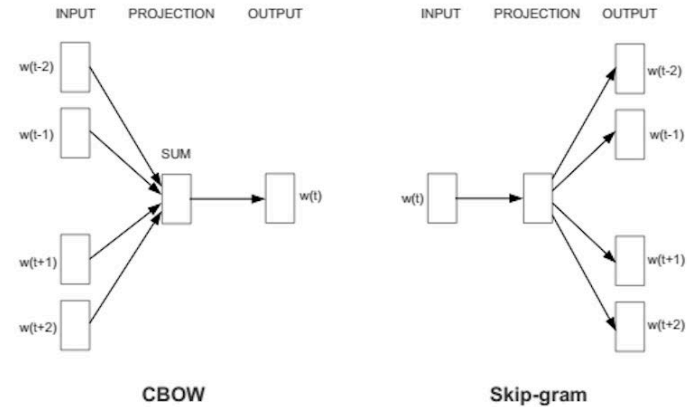

2 million nodes of 12 types
5 million edges of 34 types

Generating Patient Representations Using SPOKE

EHR Code Vectorization

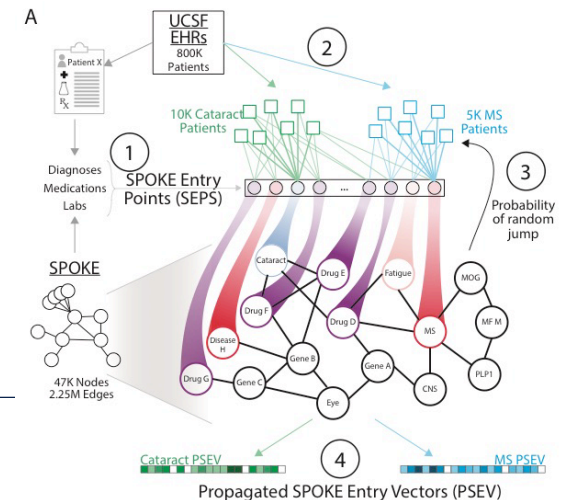

- Machines are good with numbers
- Common practice to turn EHR entities into numbers or vectors
 - Word2Vec

$$\text{King} - \text{Man} + \text{Woman} = \text{Queen}$$

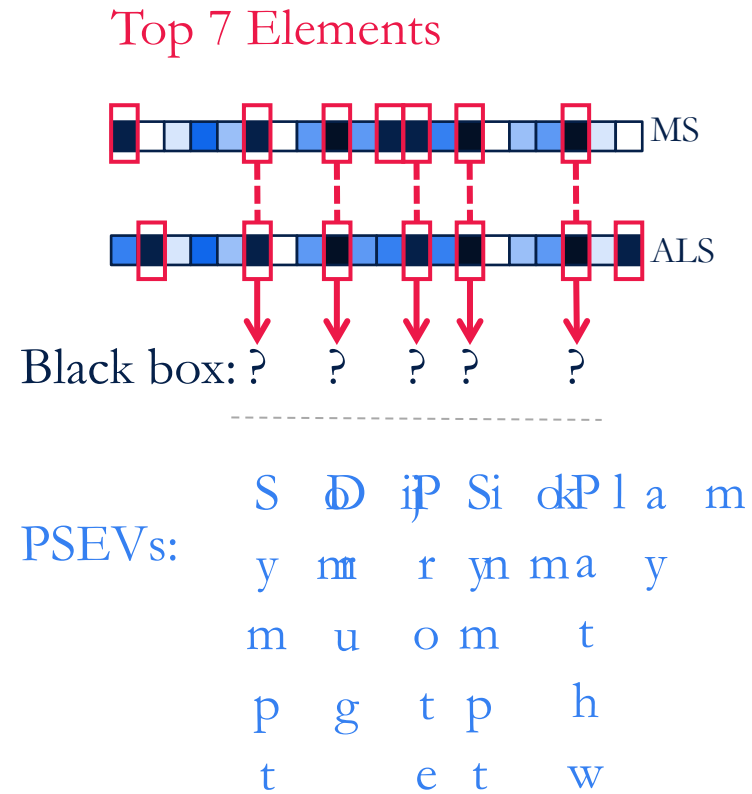

EHR Code Vectorization

- Machines are good with numbers
- Common practice to turn EHR entities into numbers or vectors
 - Word2Vec
- My method:
 - Uses EHRs as context to determine level of information flow through each node in a knowledge network
 - Propagated SPOKE Entry Vectors (PSEVs)
- Main difference: one is a black box

EHR Code Vectorization

Knowledge Network is Fundamental to Biomedical Predictions

Combine Biology, Chemistry, Computer & Data Sciences

- Chances that this TBI patient will have suicidal tendencies?
- Will stem cell therapy work for this hepatoma patient?
- ...

- Congenital CV risk factors in underserved populations?
- What can we learn about protein expression by combining selected GWAS and PheWAS?
- ...

Graph Theory

Three hundred years of algorithmic study
